PROFILE

B.Tech Computer Science and Engineering student specializing in AI/ML at VIT-AP University with strong foundations in Java, Python, data structures, algorithms, and object-oriented programming. Experienced in developing machine learning and computer vision projects, with hands-on exposure to Git/GitHub. Qualified for GATE 2026 with a strong problem-solving and analytical approach, seeking to contribute to software and technology-driven engineering solutions.

EDUCATION

VIT-AP University <i>Bachelor of Technology in Computer Science and Engineering in AIML</i> - CGPA: 8.52 / 10 - Qualified GATE 2026	Andhra Pradesh 2023 – 2027
KSR Hi Tech Sr. Sec School <i>Grade 12</i> Percentage: 78.4%	Tamil Nadu 2022 – 2023
KSR Hi Tech Sr. Sec School <i>Grade 10</i> Percentage: 93.2%	Tamil Nadu 2020 – 2021

EXPERIENCE

EdVedha <i>Artificial Intelligence Internship</i> - Wrote and debugged Python code to build data preprocessing and feature engineering pipelines using scikit-learn and Pandas. - Implemented, tested, and iterated on classification algorithms (Random Forest, SVM), improving accuracy by up to 10% through systematic tuning. - Worked through the full development cycle end-to-end: requirements, implementation, validation, and reporting results to stakeholders.	Remote Feb 2025 – April 2025
--	---------------------------------

PROJECTS

Pothole Detection using YOLOv8 <i>Python, YOLOv8, OpenCV, PyTorch</i> - Built a real-time detection application by training and integrating a custom YOLOv8 model with an OpenCV-based inference pipeline on 2,000+ annotated images. - Tested the system against unseen data, achieving 98.9% Precision, 76.5% Recall, and 82.7% mAP@50, and iterated on the pipeline to improve reliability. - Managed the codebase with Git/GitHub, maintaining version history for reproducibility and collaboration.	2026
ML Model Optimization using Microsoft NNI <i>Python, Scikit-learn, NumPy, Matplotlib</i> - Built an automated experimentation tool using Microsoft NNI to configure and run hyperparameter search across multiple trials. - Applied the TPE search algorithm to systematically identify the best-performing model configuration. - Achieved 96.49% accuracy on the Breast Cancer Wisconsin dataset; wrote reusable code to auto-generate confusion matrices and performance charts. - Structured the project for reproducibility with logged configs, automated result tracking, and documented setup on GitHub.	2025
EV Dynamic Wireless Charging Roads <i>Arduino, IoT, Embedded Systems</i> - Programmed and built an IoT prototype in Arduino, integrating IR sensors with electromagnetic induction hardware to detect vehicle presence and trigger charging. - Designed and debugged the sensing/control logic to reliably activate charging coils, validating the proof-of-concept through iterative testing. - Achieved 85%+ energy transfer efficiency across a 30 cm charging lane in testing.	2026

TECHNICAL SKILLS

Languages: Java, Python, SQL
Tools & Platforms: Arduino IDE, AWS (Cloud Foundations, Architecting)
Areas of Interest: Machine Learning, Computer Vision, Prompt Engineering

CERTIFICATIONS & ACHIEVEMENTS

GATE 2026 — Qualified	All India
<i>Data Science and Artificial Intelligence (DA)</i>	2026
AWS Academy Graduate — Cloud Foundations	Amazon Web Services
<i>Credential: AWS Academy</i>	2025
AWS Academy Graduate — Cloud Architecting	Amazon Web Services
<i>Credential: AWS Academy</i>	2025
Oracle AI Foundations Associate — AI	Oracle
<i>Credential: Oracle Certification</i>	2025

SOFT SKILLS

Teamwork | Leadership | Effective Communication | Critical Thinking | Time Management | Navigating Ambiguous Tasks

LANGUAGES

English (Professional), Tamil (Native)
